Encompass Visual Data Representation Accuracy Statement:

The Encompass platform presents data as searched for and purchased by the Encompass User from third party data sources available in the United Kingdom, including (but not limited to) Companies House, Land Registry and Creditsafe.

The data is delivered to Encompass direct from source suppliers. Encompass capabilities are limited to delivering two formats of data, PDF reports and Data Visualisation elements.

PDF Reports are received from data providers or created by Encompass.

PDF Reports received from data providers are unchanged by Encompass. They are provided in the prescribed format and meet all regulatory or legislative requirements where appropriate. Encompass does not alter or change any source PDF reports received.

PDF Reports created by Encompass incorporate the data received from third parties into intelligent, informative reports. Data is not changed or interpreted by Encompass and is reliant on the data provided by the appropriate third parties.

Data Visualisation elements are created using the exact data received from third party data providers. Encompass relies on this data to be provided accurately without error. Encompass will continue to ensure that the quality and consistency of the data provided is of the highest standard and reliability.

Encompass constructs the visualisation to rationalise the picture by identifying relationships through a criteria of "matching" and "merging" common entities for people, organisations and locations.

Encompass's matching and automatic merge operation conforms to strict matching rules determined to achieve the highest level of accuracy. The matching and merging is performed only on data contained within the searches of a given workspace.

Encompass provides a secondary level of "suggested" matching whereby a specific icon indicator is provided to alert the user that the match is possible only.

For more information please read our End User License Agreement (EULA).
